Three Brooks
Local Nature Reserve

The Three Brooks Local Nature Reserve is a valuable wildspace that people living in Bradley Stoke can enjoy all year round.

The reserve forms a large part of the town and consists of many different wildlife habitats including the Three Brooks lake, bluebell woodlands, newt ponds, acres of grassland and of course the small brooks that feed into the lake. It is home to a great variety of animals and wildflowers.

The reserve holds clues to the history of the area. Traditional management of the woodlands, such as coppicing have now been brought back and help create open glades in the woods providing space for old oak trees to grow strong and bluebells and other spring flowering plants to flourish.

The grassland strips that flower in the summer reveal rare agricultural weeds and flowers. The broad hedgerows that provide food and shelter for animals have been dated back to Saxon times and act as important wildlife corridors into the reserve.

The lake provides a peaceful setting for people to study the local wildfowl. You can regularly spot swans, mallards, tufted ducks and moorhens nesting on the islands. A quick glance of a blue flash means you have spotted a kingfisher!

Woodlands

The reserve contains three woodlands, namely Webb’s Wood, Savage’s Wood and Sherborne’s Brake. Webb’s Wood can be dated as far back as 1725, making it an ancient woodland. The other two woodlands are about 200 years old.

Webb’s Wood is a dark and dense woodland. Its understorey of hazel, hawthorn and field maple provides homes for small songbirds. It has wonderful displays of bluebells and anemones in spring.

Savage’s Wood is the largest area of woodland. It is light and spacious, with plenty of mature, tall trees. There are also several standing dead trees, in which woodpeckers love to drill for insects and make their homes – look out for the round holes they make in the bark.

Sherborne’s Brake, growing along Stoke Brook, is different again – water-loving crack willows grow here, as do tall, rustling black poplars and even some apple trees. In autumn, look out for the bristly acorn cups of the turkey oaks growing at the wood’s summit.

Traditional woodland management methods, including coppicing are being reintroduced to all three woodlands to help increase wildlife diversity.

Wetlands

Horham, Patchway and Stoke Brooks, from which the reserve gets its name, meet at Three Brooks Lake before flowing eastwards back under the M4 as Bradley Brook.

The lake itself is man-made, formed by damming the merging brooks, and has a healthy fish population, as well as attracting many birds including wintering water rail.

The reserve also has two new ponds in the grassland to the north of Savage’s Wood, which have been created to become habitats for newts. Pond snails, dragonflies and frogs have already moved in!

Grasslands

The reserve’s grasslands host a huge variety of wildflowers, many of which are arable plants reflecting the area’s farming past.

The man-made Tump (an old word for “hillock”) is a good place to see skylarks, with their graceful song, in summer. The grassland next to Webb’s Wood is particularly good for wildflowers and is traditionally cut by hand to maintain its variety.

Exploring our heritage

The network of footpath and cyclepaths provide an excellent opportunity to explore our local environment. The Three Brooks Walk and the Community Forest Path pass through the reserve and offer walkers a chance to discover the wider countryside.

A place for everyone

The Three Brooks Local Nature Reserve is the largest area of open space in Bradley Stoke and is free for all to enjoy. The reserve has many different habitats to explore and plenty of wildlife to see.

Help look after our local environment by following the countryside code.

Find out more information about the countryside code by visiting www.countrysideaccess.gov.uk

You can help

The Three Brooks Nature Conservation Group consists of local residents who help look after the reserve. They organise regular activity days and nature walks.

The group is free to join and is open to anyone who has an interest in the reserve.

To find out more about the group please visit our website www.three-brooks.info

The reserve contains areas of open water, so please be aware of these when visiting the site. During periods of strong winds it is advisable to avoid the woodland.

Visit www.wildroots.info for further information about our local heritage.
